

# Elements

Friday, October 16, 2015 12:29 AM

Html elements are used to describe the structure of the page (e.g. headings, subheadings, paragraphs).

Structural markup - elements you can use to describe both headings and paragraphs.

Semantic markup - provides extra information such as where emphasis is placed in a sentence.

White space - where 2 or more spaces gets presented as only 1 space //made to make code easier to follow.

- The **DOCTYPE** declaration defines the document type to be HTML
- The text between **<html>** and **</html>** describes an HTML document
- The text between **<head>** and **</head>** provides information about the document
- The text between **<title>** and **</title>** provides a title for the document
- The text between **<body>** and **</body>** describes the visible page content
